EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Takayuki Yasaku on June 7, 2007.

2. The application has been amended as follows:

In the claims:

20. (Currently amended) A system for identifying the recipient of a material item, the system comprising an encoding data processing apparatus for generating at least one version of an original material item formed by combining one of a predetermined set of code words into a copy of the original material item, the apparatus comprising a bandwidth adaptation processor configured to adapt a bandwidth of the code word with respect to a part of bandwidth of the original material item, and an encoder configured to combine the bandwidth adapted code word with a copy of the original material item, with an effect that the bandwidth adapted code word is combined with the part of the bandwidth of the original material item, and a detecting data processor apparatus according to claim 14, configured to detect with a predetermined false positive

probability the recipient by detecting the presence or absence of the code word in the material.

Allowable Subject Matter

3. After a further search and a thorough examination of the present application and in light of the prior art made of record, claims 1-23, 26-28, 32-37 are found to be in condition for allowance.

Reasons for Allowance

4. The following is an Examiner's statement of reasons for the indication of allowable subject matter:

The claims are allowable over the prior art of record since the cited reference taken individually or in combination fails to particularly disclose an encoding data processing apparatus comprising a bandwidth adaptation processor configured to adapt a bandwidth of a code word with respect to a part of bandwidth of an original material item, and an encoder configured to combine the bandwidth adapted code word with a copy of the original material item, with an effect that the bandwidth adapted code word is combined with the part of the bandwidth of the original material item.
